

Project Documentation: Personal Portfolio Website

Overview

This document explains the layout and features of a one-page personal portfolio website. Semantic HTML5 is used in the current codebase, giving the site a clean and accessible foundation. As the portfolio website grows from this HTML base. A section to display particular coursework/projects/achievements from KGSL Institute of Technology will also make the professional profile stronger.

Breakdown of File Structure

1. Document Structure and Metadata (<head>)

The file starts with the usual `<!DOCTYPE html>` declaration, telling browsers to render the file using the latest HTML5 standards.

- Language: Selected to be English (`lang="en"`)
- Character Set: Supports a wide range of characters and symbols with UTF-8.
- Viewport: `<meta name="viewport">` tag helps to make the website responsive and scale properly on mobile devices.
- Title: Browser tab will display "My Portfolio - Suthanthiran Senthilkumar"

2. Header & Navigation (<header>)

The top of the page contains the introduction and main navigation.

- Main Heading: The developer's name should be displayed prominently within a `<h1>` tag.
- Navigation (`<nav>`): 3 anchor links (`#about`, `#skills`, `#contact`). These are "jump links" that enable the user to click to instantly scroll to the related sections on the same page.

3. Main Content Area (<main>)

The main content of the portfolio is wrapped in a `<main>` tag and divided into three separate semantic `<section>` blocks:

A. About Me (`id= "about"`)

- Introduces the developer and where he is working and his role as a web development intern.
- Includes useful information like batch info and a contact email in regular paragraph (`<p>`) tags.

B. My Skills (id="skills")

- Emphasizes technical and people skills.
- Neatly presents skills such as HTML, VS Code, problem solving and communication using an unordered list () and list items ()

C. Section de contact (id="contact")

- Contact Form: Contains a form (<form>) for user input, with fields for Name, Email, and Message body.
 - o All input has the required attribute so if the user leaves a field empty, the browser will not allow submitting the form.
 - o Functionality note: The action is set to # which means that the form is not yet sending data to a server.
- Direct Contact Info: Phone number and email listed below the form. The email is a mailto: link, which will open the visitor's default email client when clicked.

4. Footer (<footer>)

At the bottom is a simple footer with copyright information, including the year (2026) and the technology used to build the page.
